CS1W-CLK

CSM_CS1W-CLK_DS_E_5_1

New Controller Link Units, Now with 4,000 Send Words

- The Controller Link is an FA network that can send and receive large amounts of data easily and at high speed. The Controller Link supports data links that enable sharing data between PLCs and computers and a message service that enables sending and receiving data whenever required.
- With Wired Controller Link Units, systems can be flexibly built by using Repeater Units to enable T-branches, long-distance wiring, and converting part of the network to optical cable.

CS1W-CLK23

CS1W-CLK13

CS1W-CLK53

Features

- Large-capacity data links are easily achieved without programming simply by setting data link tables.
- Up to 20,000 *1 send/receive words can be set per node for Units (up to 62,000 words for Boards).
- Data links can be performed with up to 4,000 *2 words per node while ensuring data concurrency.
- User-set data link tables can be changed while data links are operating. *3
- Errors for the entire system can be monitored by using error diagnosis support software and a variety of status flags.
- With the token ring mode of Optical Ring Controller Link Units/Boards, duplex communications paths enable communications to continue normally even if the cable becomes disconnected.
- Detecting locations of disconnection greatly shortens time required for maintenance.
- Installing Controller Link Units in a CS1D system enables Duplex Communications Units to further enhance reliability. *4

*1. Supported for unit version 1.2 or later.

*2. CS1W-CLK□3 and 3G8F7-CLK□3 are supported.

*3. Supported for CS1W-CLK□3, 3G8F7-CLK□3, and models ending with "-V1" (CS1W-CLK12-V1 *5 and CS1W-CLK52-V1 *5 with lot numbers 0306□□_□□□ or later).

*4. Supported for CS1W-CLK13/CLK12-V1 *5/CLK53/CLK52-V1 *5 and CS1D Duplex and Simplex Systems.

*5. Discontinuation models in July 2012.

Model	3G8F7-CLK23-E 3G8F7-CLK13-E 3G8F7-CLK53-E	Note: The following models are discontinued. 3G8F7-CLK21-EV1 3G8F7-CLK12-EV1 3G8F7-CLK52-EV1	Note: The following models are discontinued. 3G8F7-CLK21-E 3G8F7-CLK12-E 3G8F7-CLK52-E
	Number of data link send/receive words (data link areas for sending/receiving that are created for a single node in a single computer)	62,000 words max.	
Send words per node	4,000 words max. (user-set links only)	1,000 words max.	
Changing data link allocations during active data links	Supported. (Data link tables can be changed during active data links.)		Not supported.
Maximum connectable nodes	62 nodes (See note 1.)		Wired model: 32 nodes Optical ring model: 62 nodes
Mixed use	Yes (See note 2.)		
Compatible FinsGateway (See note 3.)	FinsGateway Version 2003.21 or higher (In CD Ver. 3.00 or higher)	FinsGateway Version 2003.00 or higher (In CD Ver. 2.00 or higher)	FinsGateway Version 3.00 or higher (In CD Ver. 1.00 or higher)
Compatible support software	CX-Integrator for CX-One Ver. 2.1 or higher, or CX-Net for CX-Programmer Ver. 7.2 or higher	CX-Net for CX-Programmer Ver. 3.2 or higher	CX-Net for Ver. 1.0 or higher

- Note: 1.** For wired models, the maximum number of nodes is 32 if repeater units are not used.
Note: 2. Old models and new models can be used mixed on the same network. In that case, however, build the system using the specifications for the old models. The data link send/receive words can be separately set to their maximums when new and old models are mixed.
Note: 3. FinsGateway Version 2003 is compatible with Windows 7 (32bit) (CD Ver.3.10 or higher), Windows Vista (CD Ver.3.10 or higher), Windows XP and Windows 2000. For Windows NT4.0 (Service Pack 3 or higher), Windows ME, or Windows 98SE, use FinsGateway Version3. (With FinsGateway Version 3, only functions supported by the 3G8F7-CLK21/CLK12/CLK52 can be used.)

Usage Precautions

- Old models and new models can be used mixed on the same network. In that case, however, build the system using the specifications for the old models. The data link send/receive words can be separately set to their maximums when new and old models are mixed.
- Repeater Units can be used to expand a Wired Controller Link Network. For Wired-to-optical Repeater Units, always use a set of two (1:1). Optical Ring Controller Link Units and Boards cannot be connected to the optical cable section between Repeater Units.
- Connect Repeater Units so that there are no more than two stages between any two nodes. One set of two Wire-to-Optical Repeater Units is counted as one stage.
