Up/Down Counting Pulse Indicator
K3HB-C

Measure High-speed Up/down Pulses with this Up/down Pulse Meter.

• Visual conf0rmation of judgement results through display colors that switch between red and green. ∗1
• Perfect for Measuring Rotary Encoder and ON/OFF Pulse Signals at High Speed
  Cumulative pulse input is 50 kHz, quadrature pulse inputs are 25 kHz, and up/down pulse inputs are 30 kHz.
Note: No-voltage contacts of up to 30 Hz are supported.

• The count value can be converted to any value.

  The length equivalent for any pulse can be set to any desired value. This is effective for feed amount and position monitor displays.

• DeviceNet models added to the series. ∗2

∗1 Visual confirmation of judgement results is not supported on models that do not have an output or models that do not support DeviceNet.
You can change the display color by setting it, but you cannot switch it based on the judgement results.
∗2 DeviceNet models have a depth of 97 mm.

⚠ Refer to *Safety Precautions for All Digital Panel Meters*.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Model Number Structure

■ Model Number Legend

Base Units and Optional Boards can be ordered individually or as sets.

Base Units

K3HB-C ☐ ☐
    1   **5**

1. **Input Sensor Code**
   NB: NPN input/voltage pulse input
5. **Supply Voltage**
   100-240 VAC: 100 to 240 VAC
   24 VAC/VDC: 24 VAC/VDC

Optional Board

Sensor Power Supply/Output Boards

K33-☐

Base Units with Optional Boards

K3HB-C☐-☐☐☐ ☐
   1   **2 3 4**   **5**

2. **Sensor Power Supply/Output Type Code**
   None: None
   CPA: Relay output (PASS: SPDT) + Sensor power supply (12 VDC±10%, 80 mA) (See note 1.)
   L1A: Linear current output (0 to 20 or 4 to 20 mA DC) + Sensor power supply (12 VDC±10%, 80 mA) (See note 2.)
   L2A: Linear voltage output (0 to 5, 1 to 5, or 0 to 10 VDC) + Sensor power supply (12 VDC±10%, 80 mA) (See note 2.)
   A: Sensor power supply (12 VDC ±10%, 80 mA)
   FLK1A: Communications (RS-232C) + Sensor power supply (12 VDC±10%, 80 mA) (See note 2.)
   FLK3A: Communications (RS-485) + Sensor power supply (12 VDC±10%, 80 mA) (See note 2.)
3. **Relay/Transistor Output Type Code**
   None: None
   C2: Relay contact (HH/H/LL/L: SPST-NO each)
   T1: Transistor (NPN open collector: HH/H/PASS/L/LL)
   T2: Transistor (PNP open collector: HH/H/PASS/L/LL)
   BCD∗: BCD output + transistor output (NPN open collector: HH/H/PASS/L/LL)
   DRT: DeviceNet (See note 2.)
   ∗ A Special BCD Output Cable (sold separately) is required.
4. **Event Input Type Code**
   None: None
   1: 5 inputs (M3 terminal block), NPN open collector
   2: 8 inputs (10-pin MIL connector), NPN open collector
   3: 5 inputs (M3 terminal block), PNP open collector
   4: 8 inputs (10-pin MIL connector), PNP open collector

Note: 1. CPA can be combined with relay outputs only.
2. Only one of the following can be used by each Digital Indicator: RS-232C/RS-485 communications, a linear output, or DeviceNet communications.

Accessories (Sold Separately)

K32-DICN: Special Cable (for event inputs with 8-pin connector)
K32-BCD: Special BCD Output Cable

Rubber Packing

Model
K32-P1

Note: Rubber packing is provided with the Controller.

Specifications

■ Ratings

Supply voltage		100 to 240 VAC, 24 VAC/VDC, DeviceNet power supply: 24 VDC
Allowable power supply voltage range		85% to 110% of the rated power supply voltage, DeviceNet power supply: 11 to 25 VDC
Power consumption (See note 1.)		100 to 240 VAC: 18 VA max. (max. load) 24 VAC/DC: 11 VA/7 W max. (max. load)
Current consumption		DeviceNet power supply: 50 mA max. (24 VDC)
Input		No-voltage contact, voltage pulse, open collector
External power supply		12 VDC±10% 80 mA
Event inputs	Hold input	NPN open collector or no-voltage contact signal ON residual voltage: 2 V max. ON current at 0 Ω: 4 mA max. Max. applied voltage: 30 VDC max. OFF leakage current: 0.1 mA max.
	Reset input	
	Bank input	
Output ratings (depends on the model)	Relay output	250 VAC, 30 VDC, 5 A (resistive load) Mechanical life expectancy: 5,000,000 operations, Electrical life expectancy: 100,000 operations
	Transistor output	Maximum load voltage: 24 VDC, Maximum load current: 50 mA, Leakage current: 100 μA max.

	Linear output	Linear output 0 to 20 mA DC, 4 to 20 mA DC:
		    Load: 500 Ω max, Resolution: Approx. 10,000, Output error: ±0.5% FS
		Linear output 0 to 5 VDC, 1 to 5 VDC, 0 to 10 VDC:
		    Load: 5 kΩ max, Resolution: Approx. 10,000, Output error: ±0.5% FS
		(1 V or less: ±0.15 V; no output for 0 V or less)

Display method		Negative LCD (backlit LED) display 7-segment digital display (Character height: PV: 14.2 mm (green/red); SV: 4.9 mm (green))
Main functions		Scaling function, measurement operation selection, output hysteresis, output OFF delay, output test, display value selection, display color selection, key protection, bank selection, display refresh period, maximum/minimum hold, reset
Ambient operating temperature		−10 to 55°C (with no icing or condensation)
Ambient operating humidity		25% to 85%
Storage temperature		−25 to 65°C (with no icing or condensation)
Altitude		2,000 m max.
Accessories		Watertight packing, 2 fixtures, terminal cover, unit stickers, instruction manual. DeviceNet models also include a DeviceNet connector (Hirose HR31-5.08P-5SC(01)) and crimp terminals (Hirose HR31-SC-121) (See note 3.)

Note: 1. DC power supply models require a control power supply capacity of approximately 1 A per Unit when power is turned ON. Particular attention is required when using two or more DC power supply models. The OMRON S8VS-series DC Power Supply Unit is recommended.

    2. For K3HB-series DeviceNet models, use only the DeviceNet Connector included with the product. The crimp terminals provided are for Thin Cables.

■ Characteristics

Display range	−19,999 to 99,999
Measurement range	Functions F1, F2: ±2 gigacounts Functions F3: 0 to 4 gigacounts

Input signals

- Contact input (dry contact input) (30 Hz max. with ON/OFF pulse width of 15 ms min.)
- No contact voltage pulse

Mode	Input frequency range	ON/OFF pulse width	ON voltage	OFF voltage	Input impedance
F1	0 to 30 kHz	16 μs min.	4.5 to 30 V	−30 to 2 V	10 kΩ
F2	0 to 25 kHz	20 μs min.			
F3	0 to 50 kHz	9 μs min.			

- Open collector

Mode	Input frequency range	ON/OFF pulse width
F1	0 to 30 kHz	16 μs min.
F2	0 to 25 kHz	20 μs min.
F3	0 to 50 kHz	9 μs min.

Note: The Up/Down Counting Pulse Meter will malfunction if a pulse greater than the input frequency range is input. SYSERR may appear on the display.

Connectable sensors	ON residual voltage: 3 V max. OFF leakage current: 1.5 mA max. Load current: Must have a switching capacity of 20 mA or higher. Must be able to properly switch load currents of 5 mA or less.
Max. No. of display digits	5 (−19999 to 99999)
Comparative output response time	1 ms max.: Transistor output; 10 ms max.: Relay contact output (time until the comparative output is made when there is a forced sudden change in the input signal from 15% to 95% or 95% to 15%)
Linear output response time	10 ms max. (time until the final analog output value is reached when there is a forced sudden change in the input signal from 15% to 95% or 95% to 15%)
Insulation resistance	20 MΩ min. (at 500 VDC)
Dielectric strength	2,300 VAC for 1 min between external terminals and case
Noise immunity	100 to 240 VAC models: ±1,500 V at power supply terminals in normal or common mode (waveform with 1-ns rising edge and pulse width of 1 μs/100 ns) 24 VAC/VDC models: ±1,500 V at power supply terminals in normal or common mode (waveform with 1-ns rising edge and pulse width of 1 μs/100 ns)
Vibration resistance	Frequency: 10 to 55 Hz; Acceleration: 50 m/s^2, 10 sweeps of 5 min each in X, Y, and Z directions
Shock resistance	150 m/s^2 (100 m/s^2 for relay outputs) 3 times each in 3 axes, 6 directions
Weight	Approx. 300 g (Base Unit only)

Degree of protection	Front panel	Conforms to NEMA 4X for indoor use (equivalent to IP66)
	Rear case	IP20
	Terminals	IP00 + finger protection (VDE0106/100)

Memory protection	EEPROM (non-volatile memory) Number of rewrites: 100,000
Applicable standards	UL61010C-1, CSA C22.2 No. 1010.1 (evaluated by UL) EN61010-1 (IEC61010-1): Pollution degree 2/Overvoltage category II EN61326: 1997, A1: 1998, A2: 2001
EMC	EMI: EN61326 industrial applications Electromagnetic radiation interference CISPR 11 Group 1, Class A Terminal interference voltage CISPR 11 Group 1, Class A EMS: EN61326 industrial applications Electrostatic Discharge Immunity EN61000-4-2: 4 kV (contact), 8 kV (in air) Radiated Electromagnetic Field Immunity EN61000-4-3: 10 V/m sine wave amplitude modulation (80 MHz to 1 GHz, 1.4 to 2 GHz) Electrical Fast Transient/Burst Noise Immunity EN61000-4-4: 2 kV (power line), 1 kV (I/O signal line) Surge Immunity EN61000-4-5: 1 kV with line (power line), 2 kV with ground (power line) Conducted Disturbance Immunity EN61000-4-6: 3 V (0.15 to 80 MHz) Power Frequency Magnetic Immunity EN61000-4-8: 30 A/m (50 Hz) continuous time Voltage Dips and Interruptions Immunity EN61000-4-11: 0.5 cycle, 0°/180°, 100% (rated voltage)

Operation

■ Functions (Operating Modes)

F1 to F3

Function name	Function No.
Individual inputs	F1
Phase differential inputs	F2
Pulse counting input	F3

Function	Operation	Operation image (application)
F1 Individual inputs	Counts input A as incremental pulses and input B as decremental pulses. The count is incremented on the rising edge of input A and decremented on the rising edge of input B. If both inputs rise at the same time, the count is not changed. The count is incremented when input B is later than input A and decremented when input B is earlier than input A.	Counting the number of people entering an area
F2 Phase differential inputs	This function is normally used when connected to an incremental rotary encoder. The count is incremented on the falling edge of input B when input A is OFF. The count is decremented on the rising edge of input B when input A is OFF.	Detecting position and speed on a semiconductor wafer conveyor line
F3 Pulse counting input	Counted on the rising edge of input A	Counting the number of workpieces

Note: 1. Meaning of H and L in Display

Symbol	Input method	No-voltage input
H		Short-circuit
L		Open

2. Requires at least half the minimum signal width. If there is less than half, a ±1 count error may occur.

Input Type Setting

	NO: Voltage pulse high	NC: Voltage pulse low
No-contact or voltage pulse input	00	01
Contact	10	11

■ What Is Prescaling?

Prescaling converts the count value to any numeric value.

To display □□□□.□ mm in a system that outputs 250 pulses for a 0.5-m feed,

the length per pulse = 500 mm (0.5 m) ÷ 250 = 2.

1. The prescale value for the K3HB-C is set using the mantissa X × exponent Y,
   so the prescale value = 2.0000 × 10°,
   X = 2.000, and Y = 00.

2. Next, set the decimal point position for one digit to the right of the decimal point: □□□□.□

OMRON
Common Specifications

■ Event Input Ratings

K3HB-P/-C	HOLD, RESET, BANK1, BANK2, BANK4
Contact	ON: 1 kΩ max., OFF: 100 kΩ min.
No-contact	ON residual voltage: 2 V max.
	OFF leakage current: 0.1 mA max.
	Load current: 4 mA max.
	Maximum applied voltage: 30 VDC max.

■ Output Ratings

Contact Output

Item	Resistive loads (250 VAC, cosφ=1; 30 VDC, L/R=0 ms)	Inductive loads (250 VAC, closed circuit, cosφ=0.4; 30 VDC, L/R=7 ms)
Rated load	5 A at 250 VAC 5 A at 30 VDC	1 A at 250 VAC 1 A at 30 VDC
Rated through current	5 A	
Mechanical life expectancy	5,000,000 operations	
Electrical life expectancy	100,000 operations	

Transistor Outputs

Maximum load voltage	24 VDC
Maximum load current	50 mA
Leakage current	100 μA max.

Linear Output

Item Outputs	0 to 20 mA	4 to 20 mA	0 to 5 V	1 to 5 V	0 to 10 V
Allowable load impedance	500 Ω max.		5 kΩ min.		
Resolution	Approx. 10,000				
Output error	±0.5% FS		±0.5% FS (±0.15 V for 1 V or less and no output for 0 V)		

Serial Communications Output

Item Type	RS-232C, RS-485
Communications method	Half duplex
Synchronization method	Start-stop synchronization (asynchronous)
Baud rate	9600/19200/38400 bps
Transmission code	ASCII
Data length	7 bits or 8 bits
Stop bit length	2 bits or 1 bit
Error detection	Vertical parity and FCS
Parity check	Odd, even

BCD Output I/O Ratings (Input Signal Logic: Negative)

I/O signal name		Item		Rating
Inputs	REQUEST CCOMPEN-SATION RESET	Input signal		No-voltage contact input
		Input current for no-voltage input		10 mA
		Signal level	ON voltage	1.5 V max.
			OFF voltage	3 V min.
Outputs	DATA POLARITY OVER DATA VALID RUN	Maximum load voltage		24 VDC
		Maximum load current		10 mA
		Leakage current		100 μA max.
	OUT1 OUT2 OUT3 OUT4 OUT5	Maximum load voltage		24 VDC
		Maximum load current		50 mA
		Leakage current		100 μA max.

Refer to the *K3HB Communications User's Manual* (Cat. No. N129) for details on serial and DeviceNet communications.

DeviceNet Communications

Communications protocol		Conforms to DeviceNet
Supported communications	Remote I/O communications	Master-Slave connection (polling, bit-strobe, COS, cyclic)
		Conforms to DeviceNet communications standards.
	I/O allocations	Allocate any I/O data using the Configurator.
		Allocate any data, such as DeviceNet-specific parameters and variable area for Digital Indicators.
		Input area: 2 blocks, 60 words max.
		Output area: 1 block, 29 words max. (The first word in the area is always allocated for the Output Execution Enabled Flags.)
	Message communications	Explicit message communications
		CompoWay/F communications commands can be executed (using explicit message communications)
Connection methods		Combination of multi-drop and T-branch connections (for trunk and drop lines)
Baud rate		DeviceNet: 500, 250, or 125 Kbps (automatic follow-up)
Communications media		Special 5-wire cable (2 signal lines, 2 power supply lines, 1 shield line)
Communications distance		(see table below)
Communications power supply		24-VDC DeviceNet power supply
Allowable voltage fluctuation range		11 to 25-VDC DeviceNet power supply
Current consumption		50 mA max. (24 VDC)
Maximum number of nodes		64 (DeviceNet Configurator is counted as one node when connected.)
Maximum number of slaves		63
Error control checks		CRC errors
DeviceNet power supply		Supplied from DeviceNet communications connector

Communications distance:

Baud rate	Network length (max.)	Drop line length (max.)	Total drop line length (max.)
500 Kbps	100 m max. (100 m max.)	6 m max.	39 m max.
250 Kbps	100 m max. (250 m max.)	6 m max.	78 m max.
125 Kbps	100 m max. (500 m max.)	6 m max.	156 m max.

The values in parentheses are for Thick Cable.

■ Derating Curve for Sensor Power Supply (Reference Values)

For 12V
Note: 1. The above values were obtained under test conditions with the standard mounting. The derating curve will vary with the mounting conditions, so be sure to adjust accordingly.

2. Internal components may be deteriorated or damaged. Do not use the Digital Indicator outside of the derating range (i.e., do not use it in the area labeled ①, above).
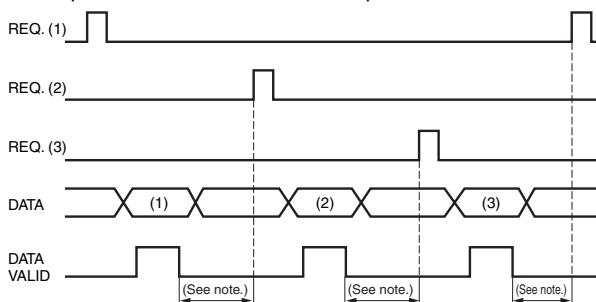

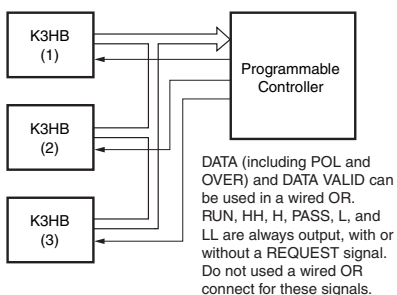

■ Internal Block Diagram
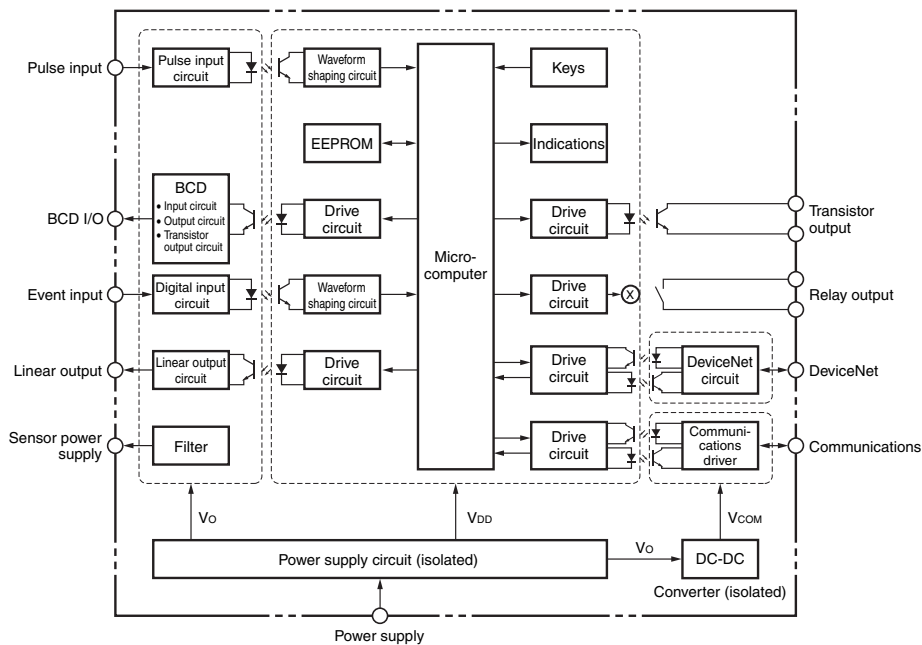

■ BCD Output Timing Chart

A REQUEST signal from a Programmable Controller or other external device is required to read BCD data.

Single Sampling Data Output

The data is set in approximately 30 ms from the rising edge of the REQUEST signal and the DATA VALID signal is output.
When reading the data from a Programmable Controller, start reading the data when the DATA VALID signal turns ON.
The DATA VALID signal will turn OFF 40 ms later, and the data will turn OFF 16 ms after that.

Continuous Data Output

Measurement data is output every 64 ms while the REQUEST signal remains ON.

Note: If HOLD is executed when switching between data 1 and data 2, either data 1 or data 2 is output depending on the timing of the hold signal. The data will not go LOW.

• The K3HB BCD output model has an open collector output, so wired OR connection is possible

DATA (including POL and OVER) and DATA VALID can be used in a wired OR. RUN, HH, H, PASS, L, and LL are always output, with or without a REQUEST signal. Do not used a wired OR connect for these signals.

Note: Leave 20 ms min. between DATA VALID turning OFF and the REQUEST signal.

Programmable Controller Connection Example
Display Unit Connection Example
Note: The BCD output connector pin number is the D-sub connector pin number when the BCD Output Cable (sold separately) is connected. This number differs from the pin number for the Digital Indicator narrow pitch connector (manufactured by Honda Tsushin Kogyo Co., Ltd.).

Refer to the following User's Manual for application precautions and other information required when using the Digital Indicator:
K3HB-R/P/C Digital Indicator User's Manual (Cat. No. N136)
The manual can be downloaded from the following site in PDF format: OMRON Industrial Web http://www.fa.omron.co.jp

■ Component Names and Functions

Max./Min. status indicator

Turns ON when the maximum value or minimum value is displayed in the RUN level.

Level/bank display

In RUN level, displays the bank if the bank function is ON. (Turns OFF if the bank function is OFF.)
In other levels, displays the current level.

Comparative output status indicators

Display the status of comparative outputs.

Status indicators

Display	Function
CMW	Lit when communications writing is ON (enabled) and not lit when OFF (prohibited).
Hold	Turns ON/OFF when hold input turns ON/OFF.

PV display

Displays PVs, maximum values, minimum values, parameter names, and error names.

Position meter

Displays the position of the PV with respect to a desired scale.

SV display

Displays SV and monitor values.

SV display status indicators

Indicator	Function
T	Turns ON when parameters for which teaching can be performed are displayed.
5, 4, 3, 2, 1	In RUN level, turn ON when the comparative set value 1, 2, 3, 4, or 5 is displayed.

MAX/MIN Key

Used to switch the display between the PV, maximum value, and minimum value and to reset the maximum and minimum values.

LEVEL Key

Used to switch level.

MODE Key

Used to switch the parameters displayed.

SHIFT Key

Used to change parameter settings. When changing a set value, this key is used to move along the digits.

UP Key

When changing a set value, this key is used to change the actual value.

Wiring Precautions
- For terminal blocks, use the crimp terminals suitable for M3 screws.
- Tighten the terminal screws to the recommended tightening torque of approx. 0.5 N·m.
- To prevent inductive noise, separate the wiring for signal lines from that for power lines.

Wiring
- Use the crimp terminals suitable for M3 screws shown below.

5.8 mm max.
5.8 mm max.
Unit Stickers (included)
- No unit stickers are attached to the Digital Indicator.
- Select the appropriate units from the unit sticker sheets provided.

V	A	V	A	%	J	Pa	Ω
s	/	N	m	W	℃	m³	k
°F	g	min	mm	rpm
VA	mV	mA	Hz
m/min	OMRON
OUT	OUT

Note: For measurements for commercial purposes, be sure to use the unit required by any applicable laws or regulations.

Mounting Method
1. Insert the K3HB into the mounting cutout in the panel.
2. Insert watertight packing around the Unit to make the mounting watertight.

Watertight packing
3. Insert the adapter into the grooves on the left and right sides of the rear case and push until it reaches the panel and is fixed in place.

Adaptor
LCD Field of Vision
The K3HB is designed to have the best visibility at the angles shown in the following diagram.

10°
30°
Rubber Packing (Sold Separately)
K32-P1
If the rubber packing is lost or damaged, it can be ordered using the following model number: K32-P1.

(Depending on the operating environment, deterioration, contraction, or hardening of the rubber packing may occur and so, in order to ensure the level of waterproofing specified in NEMA4, periodic replacement is recommended.)

Note: Rubber packing is provided with the Controller.

OMRON

Main Functions

■ Main Functions and Features

Measurement

Function `FUnC`

The K3HB-R has the following six functions for receiving and displaying input pulses.

F1: Rotation (rpm)/circumferential speed

F2: Absolute ratio

F3: Error ratio

F4: Rotational difference

F5: Flow rate ratio

F6: Passing time

The K3HB-P has the following six functions for receiving and displaying input pulses.

F1: Passing speed

F2: Cycle

F3: Time difference

F4: Time band

F5: Measuring length

F6: Interval

The K3HB-C has the following three functions for receiving and displaying input pulses.

F1: Individual inputs

F2: Phase differential inputs

F3: Pulse counting input

Filters

Input Types `in-tA, in-tb, in-tA`

Specify the types of sensor connected to input A and input B.

Compensation

Compensation `CoomPn, Coom-P`

The display can be changed to a preset compensation value using the compensation input.

Key Operations

Teaching

The present measurement value can be used as a scaling value.

Key Protection

Key protection restricts level or parameter changes using the keys to prevent unintentional key operations and malfunctions.

Outputs

Comparative Output Pattern `oUt-P`

Zone and level comparative output patterns can be selected for comparative outputs.

Output OFF Delay `oFF-d`

Delays turning OFF comparatives for a set period. This can be used to provide sufficient time to read the comparative output ON status when the comparative result changes at short intervals.

Shot Output `SHot`

Turns ON the comparative output for a specific time.

Output Logic `oUt-n`

Reverses the output logic of comparative results.

Output Test `tESt`

Output operation can be checked without using actual input signals by using the keys to set a test measurement value.

Linear Outputs `LSEtC, LSEtu, LSEtH, LSEtL`

A current or voltage proportional to the change in the measurement value can be output.

Standby Sequence `StdbY`

The comparison outputs can be kept OFF until the measurement value enters the PASS range.

Display

Display Value Selection `dCSP`

The display value can be set to the present value, the maximum value, or the minimum value.

Display Color Selection `CoLor`

The present value display color can be set to green or red. The color of the present value can also be switched according to the comparative output.

Display Refresh Period `drEF`

When the input changes rapidly, the display refresh period can be lengthened to control flickering and make the display easier to read.

Position Meter `PoS-t, PoS-H, PoS-L`

The present measurement value can be displayed as a position in relation to the scaling width on a 20-gradation position meter.

Prescale `PS.Au, PS.RY, PS.bu, PS.bY`

The input signal can be converted and displayed as any value.

Comparative Set Value Display `Su.dSP`

Select whether or not to display the comparative value during operation.

Display auto-return `rEt`

Automatically returns the display to RUN level when there are no key operations (e.g., max./min. switching, bank settings using keys).

Other

Bank Selection `bnP-C`

Switch between 8 comparative value banks using the keys on the front panel or external inputs. A set of set comparative values can be selected as a group.

Bank Copy `CoPY`

Any bank settings can be copied to all banks.

Interruption Memory `nEno`

The measured value can be recorded when the power supply is interrupted.

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.
To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

In the interest of product improvement, specifications are subject to change without notice.
