Parameter List

TYPE 3G3RX-D-E1F

Customised to your machine

INSTRUCTION MANUAL

Thank you for purchasing 3G3RX inverter.

To ensure safe operation, please be sure to read the safety precautions provided in this document along with all of the user manuals for the inverter. Please be sure you are using the most recent versions of the user manuals. Keep this instruction manual and all of the manuals in a safe location and be sure that they are readily available to the final user of the products.

					[mm

* Factory default settings for relay output are NC contact for AL1 and NO contact for AL2.

Terminal symbols, Screw size and Tightening Torque

Screw Size	M3	M4	M5	M6	M8	M10
				(max. 4.9)		20.0 N·m (max. 22.0)

Keys

	Name	Description
OCAL EMOTE	Remote key	It changes form local to remote mode. Press the key during 2 seconds to switch between modes
~	Increment key	Changes the set values, parameters and Commands.
>	Decrement key	
«	Left cursor	1
≫	Right cursor	
FWD RUN	Forward RUN	Starts the operation in forward direction
REV RUN	Reverse RUN	Starts the operation in reverse direction
STOP RESET	STOP/RESET key	Stops the operation. Functions as the Reset key if an error occurs.
_	Enter key	Enters and stores the data.
ESC	Escape key	Returns to the above layer

Safety Precautions

Indications and Meanings of Safety Information

In this user's manual, the following precautions and signal words are used to provide information to ensure the safe use of the 3G3RX Inverter. The information provided here is vital to safety. Strictly observe the precautions provided.

Meanings of Signal Words

Do not remove the terminal cover during the power supply and 10 minutes after the power shut off. Doing so may result in a serious injury due to an electric shock

Do not operate the Operator or switches with wet hands. Doing so may result in a serious injury due to an electric shock.

Inspection of the Inverter must be conducted after the power supply has been turned off. Not doing so may result in a serious injury due to an electric shock

Snock. The main power supply is not necessarily shut off even if the emergency shut off function is activated.

Do not touch the inverter fins, braking resistors and the motor, which become too hot during the power supply and for some time after the power shut off function is activated.

Do not connect resistors to the terminals (+1, P/+2, N/-) directly. Doing so might result in a small-scale fire, heat generation or damage to the unit. Install a stop motion device to ensure safety. Not doing so might result in a minor injury. (A holding prake is not a stop motion device designed to ensure

Be sure to use a specified type of braking resistor/regenerative braking unit. In case of a braking resistor, install a thermal relay that monitors the temperature of the resistor. Not doing so might result in a moderate burn due to the heat generated in the braking resistor/regenerative braking unit. Configure a sequence that enables the Inverter power to turn off when unusual over heat

ing is detected in the braking resistor/regenerative braking unit. The Inverter has high voltage parts inside which, if short-circuited, might cause damage to itself or other property. Place covers on the openings or take other precautions to make sure that no metal objects such as cutting bits or lead wire scraps go inside when installing and wiring.

Take safety precautions such as setting up a molded-case circuit breaker (MCCB) that matches the Inverter capacity on the power supply side. Not doing so might result in damage to property due to the short circuit of the

Do not dismantle, repair or modify this product. Doing so may result in an injury.

SUITABILITY FOR USE

OMRON shall not be responsible for conformity with any standards, code, or regulations that apply to the combination of products in the customer's application or use of the products.

Take all necessary steps to determine the suitability of the product for the systems, machines, and equipment with which it will be used. Please know and observe all prohibitions of use applicable to the products.

NEVER USE THE PRODUCTS FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OWRON PRODUCTS ARE PROPERLY RATED AND IN-STALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

2-2-1 Nishikusatsu, Kusatsu-shi, Shiga, 525-0035 Japan Tel: (81) 77-565-5223 Fax: (81) 77-565-5568

Note: In the interest of product improvement, specifications are subject to change without notice.

Printed in Japan

Precautions for Safe Use

Installation and Storage

Do not store or use the product in the following places.

- Locations subject to direct sunlight.
- Locations subject to ambient temperature exceeding the specifications.
 Locations subject to relative humidity exceeding the specifications.
- Locations subject to condensation due to severe temperature fluctuations.
 Locations subject to corrosive or flammable gases.
- Locations subject to exposure to combustibles.
- Locations subject to dust (especially iron dust) or salts.
- Locations subject to exposure to water, oil, or chemicals.
 Locations subject to shock or vibration

Transporting, Installation, and Wiring

- Do not drop or apply strong impact on the product. Doing so may result in damaged parts or malfunction.
- Do not hold by the front cover and terminal cover, but hold by the fins during transportation
- Confirm that the rated input voltage of the inverter is the same as AC power supply voltage.
- Do not connect an AC power supply voltage to the control input/output terminals. Doing so may result in damage to the product.
- Be sure to tighten the screws on the terminal block securely. Wiring work must be done
 after installing the unit body.
- Do not connect any load other than a three-phase inductive motor to the U, V, and W
 output terminals.
- Take sufficient shielding measures when using the product in the following locations. Not doing so may result in damage to the product.
- · Locations subject to static electricity or other forms of noise.
- Locations subject to strong magnetic fields.
- · Locations close to power lines
- If a parameter is set incorrectly when starting up, adjusting, maintaining or replacing, an unexpected operation may occur. Perform the operation after enough confirmation.
- When using Drive Programming, confirm that the program data is downloaded normally before starting the operation.

Operation and Adjustment

- Be sure to confirm the permissible range of motors and machines before operation because the inverter speed can be changed easily from low to high.
- Provide a separate holding brake if necessary.
- If Drive Programming stops during multi-function output, the output status is held. Take safety precautions such as stopping peripheral devices.
- If the clock command is used in Drive Programming, an unexpected operation may occur due to weak battery or removal of the LCD digital operator. Take measures such as detecting a weak battery or removal of the LCD digital operator (the clock data detects the initial setting and all zero), stopping the inverter or programs.

Maintenance and Inspection

- Be sure to confirm safety before conducting maintenance, inspection or parts replacement.
- The capacitor service life is influenced by the ambient temperature. Refer to "Product life curve" described in the manual. When a capacitor reaches the end of its service life and does not work as the product, you need to replace the capacitor.
- When disposing of LCD digital operators and wasted batteries, follow the applicable ordinances of your local government. When disposing of the battery, insulate it using tape.

The following display must be indicated when products using lithium primary batteries (with more than 6 ppb of perchlorate) are transport to or through the State of California, USA. Perchlorate material - special handling may apply

See www.dtsc.ca.gov/hazardouswaste/perchlorate

- The 3G3AX-OP05 has the lithium primary battery (with more than 6 ppb or perchlorate). Label or mark the above display on the exterior of all outer shipping packages of your products when exporting your products which the 3G3AX-OP05 are installed to the State of California, USA.
- Do not short + and -, charge, disassemble, heat, put into the fire, or apply strong impact on the battery. The battery may leak, explode, produce heat or fire. Never use the battery which was applied strong impact due to such as fall on the floor, it may leak.
- UL standards establish that the battery shall be replaced by an except engineer. The expert engineer must be in charge of the replacement and also replace the battery ac-
- cording to the method described in this manual. • When the display of LCD digital operator can not be recognized due to the service life, replace the LCD digital operator.

Precautions for Correct Use

Installation

 Mount the product vertically on a wall the product's longer sides upright. The material of the wall has to be noninflammable such as a metal plate.

Restart Selection Function

- Do not come close to the machine when using the Restart selection function (b001, b008) because the machine may abruptly start when stopped by an alarm.
- Be sure to confirm the RUN signal is turned off before resetting the alarm because the machine may abruptly start

Deceleration Stop Function

Do not come close to the machine when selecting reset in the Deceleration stop function
 (b050) because the machine may abruptly start after the power is turned on.

Operation Stop Command

- Provide a separate emergency stop switch because the STOP key on the Operator is valid only when function settings are performed.
- When checking a signal during the power supply and the voltage is erroneously applied to the control input terminals, the motor may start abruptly. Be sure to confirm safety before checking a signal.

Maintenance and Parts Replacement

 Inverters contain components and will operate property only when each component operates normally. Some of the electrical components require maintenance depending on application conditions. Periodic inspection and replacement are necessary to ensure proper long-term operation of inverters. (Quoted from The Recommendation for Periodic Maintenance of a General-purpose Inverter published by JEMA.)

· When a cooling fan reaches the end of its service life, replace it.

Product Disposal

• Comply with the local ordinance and regulations when disposing of the product.

UL Cautions

The warnings and instructions in this section summarizes the procedures necessary to ensure an inverter installation complies with Underwriters Laboratories guidelines.

They are used to provide both an adjustable voltage and adjustable frequency to the AC motor. The inverter automatically maintains the required voltage-Hz ration allowing the capability through the motor speed range.

- Use 60/75°C Cu wire only. For 3G3RX series except for models 3G3RX-A4055, -A4075 and -A4110.
- Use 75°C Cu wire only. For models: 3G3RX-A4055, -A4075 and -A4110.
- Suitable for use on a circuit capable of delivering not more than 100k rms symmetrical amperes, 240 V maximum. (For models:200 V class)
- Suitable for use on a circuit capable of delivering not more than 100k rms symmetrical amperes, 480 V maximum. (For models:400 V class)
- · Install device in pollution degree 2 environment or equivalent.
- Maximum Surrounding Air Temperature 50°C.
- Caution -Risk of Electric Shock- Capacitor discharge time is at least 10 minutes.
- Solid state motor overload protection reacts with max. 120% of FLA.
- Integral solid state short circuit protection does not provide branch circuit protection. Branch circuit protection must be provided in accordance with the National Electric Code and any additional local codes.

Circuit breaker and Fuse Size

Distribution fuse/circuit breaker size marking is included in the manual to indicate that the unit shall be connected with a Listed inverse time circuit breaker, rated 600 V with the current ratings or UL Listed fuses as shown in the table below.

Input Voltage	Inverter Model	Circuit Breaker/Fuse	Ratings (A)
200 V Class	3G3RX-A2004 to A2037	Fuse (Type J)	30
	3G3RX-A2055 to A2110	Fuse (Type J) or	100
	3G3RX-A2150 to A2220	Inverse time circuit Breaker	125
	3G3RX-A2300, A2370	-	225
	3G3RX-A2450		250
	3G3RX-A2550		300
400 V Class	3G3RX-A4004 to A4040	Fuse (Type J)	20
	3G3RX-A4055 to A4110	Inverse time circuit Breaker	40
	3G3RX-A4150 to A4220		75
	3G3RX-A4300, A4370		100
	3G3RX-A4450, A4550		150
	3G3RX-B4750, B4900		225
	3G3RX-B411K		300
	3G3RX-B413K		350

Wire Connectors

Field wiring connections must be made by a UL Listed and CSA certified closed-loop terminal connector sized for the wire gauge involved.

Connector must be fixed using the crimp tool specified by the connector manufacturer.
