PROGRAMMABLE CONTROLLERS MINSER-F

## **USER'S MANUAL**

Manual Number	JY997D13901
Revision	L
Date	April 2015

This manual describes the part names, dimensions, mounting, and specifications of the product. Before use, read this manual and the manuals of all relevant products fully to acquire proficiency in handling and operating the product. Make sure to learn all the product information, safety information, and precautions.

Store this manual in a safe place so that it can be taken out and read whenever necessary. Always forward it to the end user. Registration

The company and product names described in this manual are registered trademarks or the trademarks of their respective companies

Effective April 2015

Specifications are subject to change without notice.

## Safety Precaution (Read these precautions before use.)

This manual classifies the safety precautions into two categories:

**↑**WARNING and **↑**CAUTION

<u>^</u> MARNING	condition
<b>∴</b> CAUTION	Indicates

that incorrect handling may cause hazardou ns, resulting in death or severe injury.

that incorrect handling may cause hazardous ns, resulting in medium or slight personal injur or physical damage

Depending on the circumstances, procedures indicated by ACAUTION may also cause severe injury.

It is important to follow all precautions for personal safety.

### How to obtain manuals

For product manuals or documents, consult with the Mitsubishi Electric dealer from who you purchased your product.

## Applicable standards

FX3U-4AD-ADP units made in June, 2005 or later comply with the EC Directive (EMC Directive) and UL standards (UL, cUL). Further information can be found in the following manual

- → FX3S Series Hardware Manual (Manual No. .IY997D48301) → FX3G Series Hardware Manual (Manual No. JY997D46001)
- → FX3GC Series Hardware Manual (Manual No. JY997D45201) → FX3U Series Hardware Manual (Manual No. JY997D18801)
- → FX3UC (D, DS, DSS) Series Hardware Manual (Manual No. JY997D28601) → FX3UC-32MT-LT-2 Hardware Manual (Manual No. JY997D31601)

Regarding the standards that relate to the main unit, please refer to either the FX series product catalog or consult with your nearest Mitsubishi product provider.

· This product is designed for use in industrial applications.

· Authorized Representative in the European Community: Mitsubishi Electric Europe B.V. Gothaer Str. 8, 40880 Ratingen, Germany

#### Caution for EC Directive

The analog special adapters have been found to be compliant to the European standards in the aforesaid manual and directive. However, for the very best performance from what are in fact delicate measuring and controlled output device Mitsubishi Electric would like to make the following points:

As analog devices are sensitive by nature, their use should be considered carefully. For users of proprietary cables (integral with sensors or actuators), these users should follow those manufacturers installation requirements.

Mitsubishi Electric recommend that shielded cables should be used. If NO other EMC protection is provided, then users may experience temporary loss or accuracy between ±10 % in very heavy industrial areas.

However, Mitsubishi Electric suggest that if adequate EMC precautions are followed for the users complete control system, users should expect accuracy as specified in this manual.

- . Sensitive analog cable should not be laid in the same trunking or cable conduit as high voltage cabling. Where possible users should run analog cables separately.
- . Good cable shielding should be used. When terminating the shield at Earth ensure that no earth loops are accidentally created.
- . When reading analog values. EMC accuracy can be improved out by averaging the readings. This can be achieved either through functions on the analog special adapters or through a users program.

The FX3U-4AD-ADP special adapter for analog input (hereinafter called 4AD-ADP) is a special adapter to add four analog input points.

### 1.1 Incorporated Items

Verify that the following product and items are included in the package:

Product FX3U-4AD-ADP analog input special adapter		FX3U-4AD-ADP analog input special adapter
Accessories User's manual (This manual)		User's manual (This manual)

## 1.2 External Dimensions, Part Names, and Terminal Layout

- [1] DIN rail mounting groove (DIN rail: DIN46277)
- [2] Name plate
- [3] Special adapter slide lock:

Used to connect additional special adapters onto the left side of this special

- [4] Special adapter connector cover:
- Remove this cover to connect additional special adapters to the left side. [5] Direct mounting hole:2 holes of φ4.5 (0.18") (mounting screw: M4 screw)
- Not used when connecting to FX3GC/FX3UC Series PLC. POWER LED (green):
- Lit while 24 V DC power is supplied properly to terminals '24+' and '24-'.
- [7] Terminal block (European type): Connect the analog voltage/current signal, and 24 V DC power supply.
- Special adapter connector:
- Used to connect this special adapter to PLC main unit or special adapter.
- [9] DIN rail mounting hook
- [10] Special adapter fixing hook
- [11] Special adapter connector:
- Used to connect communication or analog special adapters to the left side of the 4AD-ADP.

### 2. Installation

For installation/uninstallation details, refer to the respective PLC User's manual Hardware Edition

#### INSTALLATION PRECAUTIONS

## **↑** WARNING

 Make sure to cut off all phases of the power supply externally before attempting installation or wiring work. Failure to do so may cause electric shock or damage to the product.

#### INSTALLATION PRECAUTIONS

## **⚠** CAUTION

- Use the product within the generic environment specifications described in PLC main unit manual (Hardware Edition).
- Never use the product in areas with excessive dust, oily smoke, conductive dusts, corrosive gas (salt air, Cl2, H2S, SO2, or NO2), flammable gas, vibration or impacts, or expose it to high temperature, condensation, or rain and wind. If the product is used in such conditions, electric shock, fire, malfunctions deterioration or damage may occur.
- When drilling screw holes or wiring, make sure cutting or wire debris does not enter the ventilation slits.
- Failure to do so may cause fire, equipment failures or malfunctions.
- Do not touch the conductive parts of the product directly. Doing so may cause device failures or malfunctions.
- Connect special adapter securely to their designated connectors. Loose connections may cause malfunctions.

## 2.1 Connection to the PLC

This section describes the connection method to the PLC (FX3U Series PLC is used for the following example).

For installation method to other PLCs, refer to the respective PLC User's manual

#### Procedure

1) Turn off the power

Disconnect all the cables connected to the PLC main unit and special adapter. and demount the main unit and special adapter mounted on DIN rail or mounted directly using screws.

2) Install an expansion board to the main unit.

For the expansion board installation procedure, refer to the following manual: → FX3U Series User's Manual - Hardware Edition

4) Slide the special adapter slide lock (fig.B) of the main unit. When connecting this product to another special adapter, please replace the 'main unit' in the above description with a 'special

6) Slide back the special adapter slide lock (fig.B) of the main unit to fix the special adapter (fig.C).

## Connection precautions

Connect all the high-speed I/O special adapters before connecting other special adapters when they are used in combination.

Do not connect a high-speed I/O special adapter on the left side of any special adapters other than other high-speed I/O special adapters.

### 3. Wiring

#### WIRING PRECAUTIONS

## **∴** WARNING

 Make sure to cut off all phases of the power supply externally before attempting installation or wiring work.
 Failure to do so may cause electric shock or damage to the product.

#### WIRING PRECAUTIONS

## **!**CAUTION

- When drilling screw holes or wiring, make sure cutting or wire debris does not enter the ventilation slits.
- Failure to do so may cause fire, equipment failures or malfunctions.
- Make sure to observe the following precautions in order to prevent any damage to the machinery or accidents due to abnormal data written to the PLC under the influence of noise:
- Do not bundle the power line or shield of the analog input/output cable together with or lay it close to the main circuit, high-voltage line, or load line.
- Otherwise, noise disturbance and/or surge induction are likely to take place. As a guideline, lay the control line at least 100mm (3.94") or more away from the main circuit ,high-voltage line, or load line.
- Ground the shield of the analog input/output cable at one point on the signal receiving side. However, do not use common grounding with heavy electrical systems.
- Make sure to properly wire to the terminal block (European type) in accordance with the following precautions.
   Failure to do so may cause electric shock, equipment failures, a short-circuit
- wire breakage, malfunctions, or damage to the product.
- The disposal size of the cable end should follow the dimensions described in the manual.
- Tightening torque should follow the specifications in the manual.
- Twist the end of strand wire and make sure that there are no loose wires
- Do not solder-plate the electric wire ends.
- Do not connect more than the specified number of wires or electric wires of unspecified size.
- Affix the electric wires so that neither the terminal block nor the connected parts are directly stressed.
- Make sure to properly wire the terminal block in accordance with the following precautions.

Failure to do so may cause electric shock, equipment failures, a short-circuit wire breakage, malfunctions, or damage to the product.

- The disposal size of the cable end should follow the dimensions described in the manual of the PLC main unit.
- Tightening torque should follow the specifications in the manual of the PLC main unit.

### 3.1 Applicable Cable and Terminal Tightening Torque

## 3.1.1 Terminal block (European type)

1) Wire size

Wiring to analog device should use 20-22 AWG wire.

2) Applicable cable

Туре	Wire size
Single-wire	0.3 mm <sup>2</sup> to 0.5 mm <sup>2</sup> (AWG22 to 20)
2-wire	2 pieces of 0.3 mm <sup>2</sup> (AWG22)

## 3) Termination of cable end

Strip the coating of strand wire and twist the cable core before connecting it, or strip the coating of single wire before connecting it.

An alternative connection is to use a ferrule with insulating sleeve

Manufacturer	Model	Caulking tool
Phoenix Contact Co., Ltd.	AI 0.5-8WH	CRIMPFOX 6*1 (or CRIMPFOX 6T-F*2)

- \*1 Old model name: CRIMPFOX ZA 3
- \*2 Old model name: CRIMPFOX UD 6

When using a stick terminal with insulating sleeve, choose a wire with proper cable sheath referring to the above outside dimensions, or otherwise, the wire cannot be inserted easily.

The tightening torque must be 0.22 to 0.25 N-m. Do not tighten terminal screws exceeding the specified torque. Failure to do so may cause equipment failures or malfunctions.

### 3.2 Power Supply Wiring

For the power supply wiring, refer to the following manual.

→ FX3S/FX3G/FX3GC/FX3U/FX3UC Series User's Manual - Analog Control Edition

### 3.3 Wiring of Analog Input

→ For the terminal configuration, refer to Section 1.2

V□+, I□+, ch □: □represents the channel number.

- \*1 Use 2-core shielded twisted pair cable for the analog input lines, and separate the analog input lines from other power lines or inductive lines.
- \*2 Make sure to short-circuit the 'V□+' and 'I□+' terminals when current is input. (□: input channel number)
- \*3 24 V DC service power supply of the FX3S/FX3G/FX3U Series PLC can also be used.

#### 3.4 Grounding

Grounding should be performed as stated below.

- The grounding resistance should be 100  $\Omega$  or less.
- Independent grounding should be performed for best results.
   When independent grounding is not performed, perform "shared grounding" of the following floure.

For details, refer to the respective PLC User's manual Hardware Edition.

- The grounding wire size should be AWG 22-20 (0.3-0.5 mm<sup>2</sup>).
- The grounding point should be close to the PLC, and all grounding wire should be as short as possible.

### 4. Specifications

# STARTUP AND MAINTENANCE PRECAUTIONS

## **∴**CAUTION

- Do not disassemble or modify the PLC.

  Doing so may cause fire, equipment failures, or malfunctions.
- For repair, contact your local Mitsubishi Electric representative.
   Do not drop the product or exert strong impact to it.
   Doing so may cause damage.

## DISPOSAL PRECAUTIONS

## **∴**CAUTION

 Please contact a certified electronic waste disposal company for the environmentally safe recycling and disposal of your device.

## TRANSPORTATION AND STORAGE PRECAUTIONS

## **∴**CAUTION

The product is a precision instrument. During transportation, avoid any impacts.
 Failure to do so may cause failures in the product. After transportation, verify the operations of the product.

### 4.1 Applicable PLC

Model name	Applicability	
FX3S Series PLC	Ver. 1.00 or later (from first production)	
FX3G Series PLC	Ver. 1.00 or later (from first production)	
FX3GC Series PLC	Ver. 1.40 or later (from first production)	
FX3U Series PLC	3U Series PLC Ver. 2.20 or later (from first production)	
FX3UC Series PLC Ver. 1.20 or later (from the production manufactured 2004 with SER No. 45****)		

The version number can be checked by monitoring D8001/D8101 as the last three digits indicate it.

#### 4.2 General Specifications

Items other than the following are equivalent to the those of the PLC main unit. For general specifications, refer to the respective PLC User's manual Hardware Edition.

Item	Specificati	on
Dielectric withstand voltage	500 V AC for one minute	Between all terminals and ground terminal of PLC
Insulation resistance	E MO or more by EOO V DC	main unit

## 4.3 Power Supply Specifications

Item	Specification
	24 V DC +20 %/-15 %, 40 mA for 24 V DC Connect a 24 V DC power supply to the terminal block.
Interface driving power	$5\ V\ DC$ , $15\ mA$ $5\ V\ DC$ power is supplied from the internal power supply of main unit.

Description

### 4.4 Performance Specifications

Item	Description	
item	Voltage input	Current input
Analog input range	0 to 10 V DC (Input resistance: 194 kΩ)	4 to 20 mA DC (Input resistance: 250 Ω)
Maximum absolute input	-0.5 V, +15 V	-2 mA, +30 mA
Digital output	12 bits, binary	11 bits, binary
Resolution	2.5 mV (10 V/4000)	10 μA (16 mA/1600)
Total accuracy	* ±1.0 % (±100 mV) for full scale of 10 V (when ambient temperature is 0 °C to 55 °C)      * FX3U/FX3UC Series PLC: 200 µs  * ±1.0 % (±160 µA) for full scale of 16 mA (when ambient temperature is 0 °C to 55 °C)	
A/D conversion time		
Input characteristics	The photocoupler is adopted to insulate the analog input area from the PLC.      The DC/IDC converter is adopted to insulate the power supply line from the analog input area.      Channels are not insulated from each other.	
Insulation method		
Occupied points	0 point (This number is not related to the maximum number of input/output points of the PLC.)	

This manual confers no industrial property rights or any rights of any other kind, nor does it confer any patent licenses. Mitsubishi Electric Corporation cannot be held responsible for any problems involving industrial property rights which may occur as a result of using the contents noted in this manual.

### Warranty

Mitsubishi will not be held liable for damage caused by factors found not to be the cause of Mitsubishi; opportunity loss or lost profits caused by faults in the Mitsubishi products; damage, secondary damage, accident compensation caused by special factors unpredictable by Mitsubishi; damages to products other than Mitsubishi products; and to other duties.

## N For safe use

- This product has been manufactured as a general-purpose part for general industries, and has not been designed or manufactured to be incorporated in a device or system used in purposes related to human life.
- Before using the product for special purposes such as nuclear power, electric power, aerospace, medicine or passenger movement vehicles, consult with Mitsubish Electric.
- This product has been manufactured under strict quality control. However when installing the product where major accidents or losses could occur if the product fails, install appropriate backup or fallsafe functions in the system.

installation or v	cut off all phases of the power supply externally before attempting viring work.  o may cause electric shock or damage to the product.

## INSTALLATION PRECAUTIONS **⚠**CAUTION

- Use the product within the generic environment specifications described in PLC main unit manual (Hardware Edition).
- main unit manual (Hardware Edition). Never use the product in areas with excessive dust, oily smoke, conductive dust corrosive gas (salt air, Cl<sub>2</sub>, H<sub>2</sub>S, SO<sub>2</sub>, or NO<sub>2</sub>), flammable gas, vibration impacts, or expose it to high temperature, condensation, or rain and wind. If the product is used in such conditions, electric shock, fire, malfunction deterioration or damage may occur.
- When drilling screw holes or wiring, make sure cutting or wire debris does no enter the ventilation slits. Failure to do so may cause fire, equipment failures or malfunctions.
- Do not touch the conductive parts of the product directly. Doing so may cause device failures or malfunctions.
- Connect special adapter securely to their designated connectors. Loose connections may cause malfunctions

### 2.1 Connection to the PLC

This section describes the connection method to the PLC (FX3U Series PLC is used for the following example).

For installation method to other PLCs, refer to the respective PLC User's manual

Hardware Edition.

- Disconnect all the cables connected to the PLC main unit and special adapter, and demount the main unit and special adapter mounted on DIN rail or mounted directly using screws.

main unit as shown on the right.
6) Slide back the special adapte slide lock (fig.B)

of the main unit to fix the special adapter (fig.C).

## Connection precautions

Connect all the high-speed I/O special adapters before connecting other special adapters when they are used in combination. Do not connect a high-speed I/O special adapter on the left side of any special adapters other than other high-speed I/O special adapters.

## 3. Wiring

#### WIRING **\_** WARNING RECAUTIONS

Make sure to cut off all phases of the power supply externally bef attempting installation or wiring work Failure to do so may cause electric shock or damage to the product

## **∴**CAUTION

When drilling screw holes or wiring, make sure cutting or wire debris does not enter the ventilation slits.
Failure to do so may cause fire, equipment failures or malfunctions.

Make sure to observe the following precautions in order to preve damage to the machinery or accidents due to abnormal data written PLC under the influence of noise: 1) Do not bundle the power line or shield of the analog input/output cable together with or lay it close to the main circuit, high-voltage line, or load

Ine.
Otherwise, noise disturbance and/or surge induction are likely to take place. As a guideline, lay the control line at least 100mm (3.94") or more away from the main circuit, high-voltage line, or load line.
2) Ground the shield of the analog input/output cable at one point on the signal receiving side. However, do not use common grounding with heavy

electrical systems.

Make sure to properly wire to the terminal block (European type) i accordance with the following precautions. Failure to do so may cause electric shock, equipment failures, a short-circui wire breakage, malfunctions, or damage to the product. The disposal size of the cable end should follow the dimensions

Do not solder-plate the electric wire ends.

Tightening torque should follow the specifications in the manual. Twist the end of strand wire and make sure that there are no loose wires

Do not connect more than the specified number of wires or electric wires

Affix the electric wires so that neither the terminal block nor the connected parts are directly stressed. ke sure to properly wire the terminal block in accordance wi

Failure to do so may cause electric shock, equipment failures, a short-circui wire breakage, malfunctions, or damage to the product. The disposal size of the cable end should follow the dimensions described in the manual of the PLC main unit

Tightening torque should follow the specifications in the manual of the PLC main unit.

## 3.1 Applicable Cable and Terminal Tightening Torque 3.1.1 Terminal block (European type)

# Wire size Wiring to analog device should use 20-22 AWG wire.

Applicable cable

Model name	Applicability
FX3S Series PLC	Ver. 1.00 or later (from first production)
FX3G Series PLC	Ver. 1.00 or later (from first production)
FX3GC Series PLC	Ver. 1.40 or later (from first production)
FX3U Series PLC	Ver. 2.20 or later (from first production)
FX3UC Series PLC	Ver. 1.20 or later (from the production manufactured in May, 2004 with SER No. 45****)

The version number can be checked by monitoring D8001/D8101 as the last three

## 4.2 General Specifications

Items other than the following are equivalent to the those of the PLC main unit. For general specifications, refer to the respective PLC User's manual Hardware

Edition.		
Item	Specification	
voltage		Between all terminals and ground terminal of PLC
Insulation resistance	5 M $\Omega$ or more by 500 V DC	main unit

Item	Specification	
A/D conversion circuit driving power	24 V DC +20 %/-15 %, 40 mA for 24 V DC Connect a 24 V DC power supply to the terminal block.	
	$5\ V\ DC$ , $15\ mA$ $5\ V\ DC$ power is supplied from the internal power supply of main unit.	

## 4.4 Performance Specifications

4.3 Power Supply Specifications

Item	Description		
item	Voltage input	Current input	
Analog input range	0 to 10 V DC (Input resistance: 194 kΩ)	4 to 20 mA DC (Input resistance: 250 $\Omega$ )	
Maximum absolute input	-0.5 V, +15 V	-2 mA, +30 mA	
Digital output	12 bits, binary	11 bits, binary	
Resolution	2.5 mV (10 V/4000)	10 μA (16 mA/1600)	
Total accuracy	±0.5 % (±50 mV) for full scale of 10 V (when ambient temperature is 25 °C±5 °C)     ±1.0 % (±100 mV) for full scale of 10 V (when ambient temperature is 0 °C to 55 °C)	±0.5 % (±80 μA) for full scale of 16 mA (when ambient temperature is 25 °C±5 °C)     ±1.0 % (±160 μA) for full scale of 16 mA (when ambient temperature is 0 °C to 55 °C)	
A/D conversion time	FX3U/FX3UC Series PLC: 200 (The data will be updated at e     FX3S/FX3G/FX3GC Series PL (The data will be updated at e	every scan time of the PLC.) C: 250 μs	
Input characteristics	4080 4000 100 100 10.2V	1640 1600 1600 1600 1600 1600 1600 1600	

from the PLC

Occupied

The photocoupler is adopted to insulate the analog input area

The DC/DC converter is adopted to insulate the power supply

0 point (This number is not related to the maximum number of

Channels are not insulated from each other.

nput/output points of the PLC.)

This manual confers no industrial property rights or any rights of any other kind, nor does it confer any patent licenses. Mitsubishi Electric Corporation cannot be held responsible for any problems involving industrial property rights which may occur as a result of using the contents noted in this manual.

Warranty
Mitsubishi will not be held liable for damage caused by factors found not to be
the cause of Mitsubishi; opportunity loss or lost profits caused by faults in the
Mitsubishi products; damage, secondary damage, accident compensation
caused by special factors unpredictable by Mitsubishi; damages to products
other than Mitsubishi products; and to other duties.

This product has been manufactured as a general-purpose part for general

when installing the product where major accidents or losses could occur if the product fails, install appropriate backup or failsafe functions in the system.
