## FX3U-128ASL-M

## **INSTALLATION MANUAL**

Manual Number	JY997D51901
Revision	D
Date	April 2015

This manual describes the part names, dimensions, mounting, cabling and specifications of the product. Before use, read this manual and the manuals of all relevant products fully to acquire proficiency in handling and operating the product. Make sure to learn all the product information, safety information, and precautions. Store this manual in a safe place so that it can be taken out and read whenever necessary. Always forward it to the end user.

#### Registration

Anywire and ANYWIREASLINK is a trademark of Anywire Corporation.

The company and product names described in this manual are registered trademarks or the trademarks of their respective companies.

#### Effective April 2015

Specifications are subject to change without notice

© 2013 Mitsubishi Electric Corporation

#### Safety Precaution (Read these precautions before use.)

This manual classifies the safety precautions into two categories:

MARNING and MCAUTION

<b><u></u> <u></u> <u></u> <u></u> <u></u> <u> </u> <u> </u> </b>	Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury.
<b> ⚠</b> CAUTION	Indicates that incorrect handling may cause hazardous conditions, resulting in medium or slight personal injury or physical damage.

Depending on the circumstances, procedures indicated by ACAUTION may also cause severe injury.

It is important to follow all precautions for personal safety.

## PRECAUTIONS REGARDING WARRANTY AND **SPECIFICATIONS**

The FX3U-128ASL-M is jointly developed and manufactured by Mitsubishi and Anywire Cornoration

Note that there are some precautions regarding warranty and specifications of this product <Warranty>

#### How to obtain manuals

For product manuals or documents, consult with the Mitsubishi Electric dealer from who you purchased your product.

#### Certification of UL, cUL standards

FX3U-128ASL-M adapter comply with the UL standards (UL, cUL). (December 2014

UL, cUL File Number: E95239

Regarding the standards that comply with the main unit, please refer to either the FX series product catalog or consult with your nearest Mitsubishi product provider.

#### Compliance with EC directive (CE Marking)

This note does not guarantee that an entire mechanical module produced in accordance with the contents of this note will comply with the following standards. Compliance to EMC directive and LVD directive for the entire mechanical module should be checked by the user / manufacturer. For more information please consult with your nearest Mitsubishi product provider.

Regarding the standards that comply with the main unit, please refer to either the FX series product catalog or consult with your nearest Mitsubishi product provider. Regarding the standards that comply with the AnyWireASLINK slave module, please consult with Anywire Corporation.

#### Requirement for Compliance with EMC directive

The following products have shown compliance through direct testing (of the identified standards below) and design analysis (through the creation of a technical construction file) to the European Directive for Electromagnetic Compatibility (2004/108/EC) when used as directed by the appropriate documentation

#### Attention

· This product is designed for use in industrial applications.

#### Note

· Authorized Representative in the European Community Mitsubishi Electric Europe B.V.

Gothaer Str. 8, 40880 Ratingen, Germany Programmable Controller (Open Type Equipment) MELSEC FX3U series manufactured

from October 1st, 2013 FX3U-128ASL-M

Standard	Remark
EN61131-2:2007 Programmable controllers - Equipment requirements and tests	Compliance with all relevant aspects of the standard.  EMI Radiated Emission Conducted Emission EMS Radiated electromagnetic field Fast transient burst Electrostatic discharge High-energy surge Voltage drops and interruptions Conducted RF Power frequency magnetic field

#### Caution for EC Directive Installation in Enclosure

Programmable logic controllers are open-type devices that must be installed and used within conductive control cabinets. Please use the programmable logic controller while installed within a conductive shielded control cabinet. Please secure the cabinet door to the control cabinet (for conduction). Installation within a control cabinet greatly affects the safety of the system and aids in shielding noise from the programmable logic controller.

Use the FX3U-128ASL-M in Zone A\*1 as defined in EN61131-2.

\*1 Zone defined in FN61131-2. Separation defined in EN61131-2 for EMC LVD regulation decided depending on condition in industrial setting.

Zone C = Factory mains which is isolated from public mains by dedicated transformers

Zone B = Dedicated power distribution which is protected by secondary surge protection. (300 V or less in the rated voltage is assumed.)

Zone A = Local power distribution which is isolated from dedicated power distribution by AC/DC converters, isolation transformers, etc. (120 V or less in the rated voltage is assumed.)

 Please attach a ferrite core less than 200 mm from the FX3U-128ASL-M side terminal block to the DP and DN signal wires. The wire should be wound twice around the ferrite core. The ferrite core should be a product equivalent to ZCAT3035-1330 by TDK Corporation.

Please attach a noise filter to the 0 V and 24 V power cables. The noise filter should be a product equivalent to SNR-10-223 by COSEL CO., LTD.

#### 1. Outline

The FX3U-128ASL-M type AnyWireASLINK system master block (hereinafter referred to as 128ASL-M) is a special function block for building an AnyWireASLINK system with FX3G/FX3GC/FX3U/FX3UC PLC.

The 128ASL-M is jointly developed and manufactured by Mitsubishi and Anywire Corporation.

The AnyWireASLINK system is a sensor network system → System configuration details, refer to the FX3U-128ASL-M User's Manual.

## 1.1 Outline and features of AnyWireASLINK system

AnyWireASLINK is a high-speed and highly reliable system which relieves the work site from complicated and incorrect wiring.

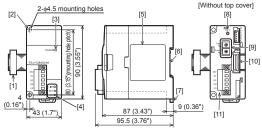

In this network, sensors at the end of a control system are connected to a programmable controller in the optimum form.

#### 1.2 Incorporated Items

Description

24V terminal for sensor power and communication.

0V terminal for sensor power and communication

Transmission signal (+) terminal. It connects

with DP of the slave module and the Terminator.

Transmission signal (-) terminal. It connects

with DN of the slave module and the Terminator.

Functional earth terminal. The one point is

grounded with the grounding terminal and

functional earth terminal of the PLC (FG terminal).

→ Refer to the FX3U-128ASL-M User's Manual.

→ Refer to the FX3U-128ASL-M User's Manual.

DP/DN disconnection

DP/DN short

Operating normally

If the mounting surface is rough, undue force will be applied to the PC board thereby causing nonconformities.

When drilling screw holes or wiring, make sure that cutting and wiring debris do not enter the ventilation slits.

Failure to do so may cause fire, equipment failures or malfunctions.

Be sure to remove the dust proof sheet from the PLC's ventilation slits when installation work is completed.

Failure to do so may cause fire, equipment failures or malfunctions.

Make sure to attach the top cover, offered as an accessory, before turning or the power or initiating operation after installation or wiring work. Failure to do so may cause electric shock.

Connect extension cables securely to their designated connectors. Loose connections may cause malfunctions.

#### 2.1 Connection to the PLC

The 128ASL-M connects on the right side of an PLC main unit or extension units/ blocks (including special function units/blocks).

For connection to an FX3UC Series PLC or FX2NC Series PLC extension block, an FX2NC-CNV-IF or FX3UC-1PS-5V is required.

For installation method to PLCs, refer to the User's Manual - Hardware Edition of the connected PLC.

#### 2.2 Mounting

The product is mounted by the following method.

- · DIN rail mounting
- Direct mounting (mounting screw: M4 screw)
- For details, refer to the User's Manual Hardware Edition of the connected PLC.

#### 3. Wiring

For wiring details, refer to the following manuals.

→ Refer to the FX3U-128ASL-M User's Manual.

	PRECAUTIONS	⚠WARN	ING
	Make sure to cu attempting wiring		power supply externally before
ı	Failure to do so m	nav cause electric shock of	or damage to the product.

#### **∴**CAUTION PRECAUTIONS

- Connect the DC power supply wiring to the dedicated terminals described i If an AC power supply is connected to a DC input/output terminal or DC
- power supply terminal, the PLC will burn out. Make sure to attach the top cover, offered as an accessory, before turning o the power or initiating operation after installation or wiring work.
- Failure to do so may cause electric shock When drilling screw holes or wiring, make sure that cutting and wiring debris do not enter the ventilation slits.
- Failure to do so may cause fire, equipment failures or malfunctions.
- Make sure to properly wire to the terminal block (European type) i accordance with the following precautions. Failure to do so may cause electric shock, equipment failures, a short-circuit
- wire breakage, malfunctions, or damage to the product. - The disposal size of the cable end should follow the dimensions described
- in the manual.
- Tightening torque should follow the specifications in the manual
- Twist the end of strand wire and make sure that there are no loose wires
- Do not solder-plate the electric wire ends.
- Do not connect more than the specified number of wires or electric wires of unspecified size.
- Affix the electric wires so that neither the terminal block nor the connected parts are directly stressed.
- Do not apply the 24VDC power before wiring the entire AnyWireASLINK system
- Connect a 24VDC external power supply to 128ASL-M for the AnyWireASLINK system
- Make sure to observe the following precautions in order to prevent any damage to the machinery or accidents due to abnormal data written to the PLC under the influence of noise
- 1) Do not bundle the main circuit line together with or lay it close to the main circuit, high-voltage line or load line. Otherwise, noise disturbance and/or surge induction are likely to take
- place. As a guideline, lay the control line at least 100mm (3.94") or more away from the main circuit or high-voltage lines.
- 2) Ground the shield wire or shield of the shielded cable at one point on the PLC. However, do not use common grounding with heavy electrical systems.
- Place the cables in a duct or clamp them.
- If not, dangling cable may swing or inadvertently be pulled, resulting it damage to the module or cables or malfunction due to poor contact.
- When disconnecting the cable from the module, do not pull the cable by the cable part.

For the cable connected to the terminal block, loosen the terminal screw. Pulling the cable connected to the module may result in malfunction or damage to the module or cable.

#### 3.1 AnyWireASLINK connection terminal block

For details on the terminal block layout, refer to section 1.5.

Item	Description
Model name	MSTB2,5/5-STF-5,08AU (Phoenix Contact Co., Ltd.)
Electric wire size	0.2 to 2.5 mm <sup>2</sup> (AWG24 to 12)
Tightening torque	0.5 to 0.6 N $\!\!\!$ m (It is common also on the connector fixing screw and the transmission line connection screw)

- To tighten the terminal block, a flathead screwdriver having a tip size of 0.6×3.5 mm is required
- · When the AnyWireASLINK connection terminal block is removed Before removing the transmission cable terminal block, check that the fixing screws on both sides are completely loosened (removed from the socket). Pulling with excessive force while the fixing screws of both ends are still tightened may damage the device.
- · When the AnyWireASLINK connection terminal block is attached Before tightening, check that there are no short circuits due to disconnected or fraved wires. Then tighten the screws at both sides securely. (Tightening torque: 0.5 Nem to 0.6 Nem)

#### 3.2 Cable treatment

Bare cables can be connected to the AnyWireASLINK connection terminal block; however, for safety reasons, it is recommended to connect the crimped bar terminals. Use UL-listed solderless terminals and, for processing, use a tool recommended by

recommended bar terminals (Phoenix Contact Co., Ltd.)

Electric wire size	Electric wire connected number	recommended bar terminals model name (Phoenix Contact Co., Ltd.)
0.75 mm <sup>2</sup>	1 cable	AI 0,75-8 GY
0.7511111	2 cables	AI-TWIN 2X 0,75-8 GY
1.25 mm <sup>2</sup>	1 cable	AI 1,5-8 BK
1.23 11111	2 cables	AI-TWIN 2X 1,5-8 BK

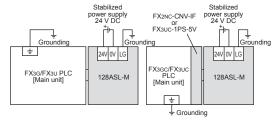

#### 3.3 Wiring precautions

. Do not run multiple transmission cables (DP, DN) using a multicore cable.

- The voltage should not fall below the lower limit of the allowable voltage range due to voltage drop caused by the cable. If the voltage falls below the lower limit, malfunctions may occur.
- . Do not connect soldered cables directly to the terminals. Doing so may loosen the
- It is recommended to use a 1.25 mm<sup>2</sup> lead wire for the main line because the power supply is superimposed on the signal wire in the AnyWireASLINK system.
- · General-purpose wire, VCTF cable and flat cable, etc. can be used. Use stranded wires instead of single core wires.

#### 3.4 Power supply and grounding wiring

#### 3.4.1 Power on timing

The AnyWireASLINK system external power supply should be turned ON simultaneously with or before the power supply of the PLC main unit it is connected to. (The order is inverted when the system is powered off.)

If the PLC main unit is powered on before the 24 V DC external power supply in the AnyWireASLINK system, a transmission cable voltage drop detection error may occur. If the error including transmission cable voltage drop detection error is detected, the error can be cleared by turning the error flag clear command (BFM#27 b0) from OFF to ON.

#### 3.4.2 Grounding

Ground the PLC as stated below.

- Perform class D grounding. (Grounding resistance: 100 Ω or less)
- . Ground the PLC independently if possible.

If it cannot be grounded independently, ground it jointly as shown below. For details, refer to the User's Manual - Hardware Edition of the connected PLC.

. Position the grounding point as close to the PLC (128ASL-M) as possible to decrease the length of the ground wire.

#### 4. Specification

For details on specifications, refer to the following manual.

#### → FX3U-128ASL-M User's Manual DESIGN **⚠ WARNING** PRECAUTIONS An AnyWireASLINK system has no control function for ensuring safety. When a communication failure occurs in the network, data in the master module are held Check the communication status information and configure an interlock circuit in the sequence program to ensure that the entire system will operate safely. Make sure to have the following safety circuits outside of the PLC to ensure safe system operation even during external power supply problems or PLC failure. Otherwise, malfunctions may cause serious accidents. 1)Most importantly, have the following: an emergency stop circuit, a protection circuit, an interlock circuit for opposite movements (such as normal vs. reverse rotation), and an interlock circuit (to prevent damage to the equipment at the upper and lower positioning limits). 2)Note that when the PLC CPU detects an error, such as a watchdog timer error, during self-diagnosis, all outputs are turned off. Also, when an error that cannot be detected by the PLC CPU occurs in an input/output control block,

A
<b> ∴</b> CAUTION

output control may be disabled

machinery operation in such a case.

 Configure safety circuits, such as an emergency stop circuit and interlock circuit, external to the AnyWireASLINK system

External circuits and mechanisms should be designed to ensure safe

- Install module so that excessive force will not be applied to the terminal blocks. Failure to do so may result in wire damage/breakage or PLC failure.
- When executing control (data changes) to an operating PLC, construct an interlock circuit in the sequence program so that the entire system operates conservatively. Additionally, when executing control such as program changes and operation status changes (status control) to an operating PLC, thoroughly read the manual and sufficiently confirm safety in advance.

#### DISPOSAL / CAUTION PRECAUTIONS Please contact a certified electronic waste disposal company for the environmentally safe recycling and disposal of your device

#### **∴**CAUTION STORAGE PRECAUTIONS

The PLC is a precision instrument. During transportation, avoid impacts larger than those specified in the general specifications of the PLC main unit manual by using dedicated packaging boxes and shock-absorbing palettes. Failure to do so may cause failures in the PLC.

After transportation, verify operation of the PLC and check for damage of the mounting part, etc.

#### 4.1 Applicable PLC

··· · · · · · · · · · · · · · · · · ·			
	Model name	Applicability	Number of connectable units
	FX3G Series PLC	Ver. 1.00 or later	One unit
	FX3GC Series PLC*1	Ver. 1.40 or later	One unit
	FX3U Series PLC	Ver. 2.20 or later	One unit
	FX3UC Series PLC*1	Ver. 2.20 or later	One unit

The version number can be checked by reading the last three digits of device D8001 or D8101

\*1 An FX2NC-CNV-IF or FX3UC-1PS-5V is necessary to connect the FX3U-128ASL-M with the FX3GC/FX3UC PLCs.

#### 4.2 General Specifications

Items other than the following are equivalent to those of the PLC main unit. For general specifications, refer to the User's Manual - Hardware Edition of the connected PLC

Item	Specification	
Dielectric withstand voltage		Between all PLC terminals and
Insulation resistance	$5~\text{M}\Omega$ or more by 500 V DC megger	ground terminal
Pollution degree	2 or less	

### 4.3 Power Supply Specification

	Item	Specification
	Driving power supply	130 mA / 5 V DC 5 V DC power is supplied internally from the main unit.
	External power supply for ASLINK communication	Voltage: 21.6 to 27.6 V DC (24 V DC -10 % to +15 % ripple voltage 0.5 Vp-p or lower Rated voltage: 24 V DC *Please use a UL Class 2 power supply. Module current consumption: 0.1 A Transmission cable supply current: Up to 2 A

#### 4.4 Performance Specifications

Item	Specification
Transmission clock	27.0 kHz
Maximum transmission distance (total length)	200 m
Transmission system	DC power supply transmission total frame cyclic system
Connection type	Bus topology (multidrop system, T-branch system, tree branch system)
Transmission protocol	Dedicated protocol (AnyWireASLINK)
Error control	Double-check system, checksum
Number of connected I/O points	Up to 128 points
Number of connectable modules	Up to 128 (varies depending on the current consumption of each slave module)
Maximum number of I/O points per system	Number of input points of the slave module + number of output points of the slave module ≤ 128 points
RAS function	Disconnected transmission cable location detection function     Transmission cable short detection function     Transmission cable voltage drop detection function
AnyWireASLINK transmission cable	UL-listed general-purpose 2-wire cable (VCTF, VCT 1.25 mm², 0.75 mm², rated temperature 70 °C or higher) UL-listed general-purpose wire (1.25 mm², 0.75 mm², rated temperature 70 °C or higher) Dedicated flat cable (1.25 mm², 0.75 mm², rated temperature 90 °C)
Power cable	UL-listed general-purpose 2-wire cable (VCTF, VCT 0.75 mm² to 2.0 mm², rated temperature 70 °C or higher) UL-listed general-purpose wire (0.75 mm² to 2.0 mm², rated temperature 70 °C or higher) Dedicated flat cable (1.25 mm², 0.75 mm², rated temperature 90 °C)
Communication with PLC	By FROM and TO instructions or direct specification of buffer memory (FX3U/FX3UC) via the buffer memory.
Number of I/O occupied points	8 points (taken from either the input or output points of the PLC)
Number of connectable units to the main unit	One unit

This manual confers no industrial property rights or any rights of any other kind, nor does it confer any patent licenses. Mitsubishi Electric Corporation cannot be held responsible for any problems involving industrial property rights which may occur as a result of using the contents noted in this manual.

Mitsubishi will not be held liable for damage caused by factors found not to be the cause of Mitsubishi; opportunity loss or lost profits caused by faults in the Mitsubishi products; damage, secondary damage, accident compensation caused by special factors unpredictable by Mitsubishi; damages to products other than Mitsubishi products; and to other duties.

## N For safe use

- This product has been manufactured as a general-purpose part for general industries, and has not been designed or manufactured to be incorporated in a device or system used in purposes related to human life.
- Before using the product for special purposes such as nuclear power, electric power, aerospace, medicine or passenger movement vehicles, consult with Mitsubishi Electric.
- This product has been manufactured under strict quality control. However when installing the product where major accidents or losses could occur if the product fails, install appropriate backup or failsafe functions in the system.

#### 1. Outline

The FX3U-128ASL-M type AnyWireASLINK system master block (hereinafter referred to as 128ASL-M) is a special function block for building an AnyWireASLINK system with FX3G/FX3GC/FX3U/FX3UC PLC.

The 128ASL-M is jointly developed and manufactured by Mitsubishi and Anywire

# Corporation. The AnyWireASLINK system is a sensor network system. → Svstem configuration details, refer to the FX3U-128ASL-M User's Manual. 1.1 Outline and features of AnyWireASLINK system

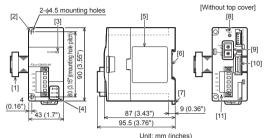

AnyWireASLINK is a high-speed and highly reliable system which relieves the work site from complicated and incorrect wiring. In this network, sensors at the end of a control system are connected to a programmable controller in the optimum form.

## 1.2 Incorporated Items

Check to ensure the following product and items are included in the package

Included Item	
FX3U-128ASL-M	1 unit
Special unit/block No. label	1 sheet
Dust proof protection sheet	1 sheet
Manuals (Japanese version, English version)	1 manual each

### 1.3 External Dimensions and Each Part Names

		MASS (Weight): Approx. 0.2 kg (0.44 lbs)		
	Extension cable	[7]	DIN rail mounting hook	
	Direct mounting hole 2 holes of φ4.5 (0.18")	[8]	SET switch (Automatic address setting switch)	
	(mounting screw: M4 screw)	[9]	Transmission points number setting	
	Power LED (green)		switch (Rotary switch)	

Status LEDs (green, red) [10] Extension connector

→ Refer to section 1.4. [11] AnyWireASLINK connection terminal block

Pafer to section 1.5. [5]

DIN rail mounting groove (DIN rail: DIN46277, 35 mm (1.38") width)

## Indications of LEDs

LED display	LED color	Status	Description
POWER	Green	ON	5 V DC is being supplied from the PLC.
		OFF	5 V DC is not being supplied from the PLC, or they are the units failure.
LINK	Green	ON	units failure
		Flicker	Operating normally
			OFF
SET		ON	Automatic address detection in progress.
	Green	Flicker	Writing in the EEPROM
		OFF	Operating normally

#### display one-seco intervals) ALM Red Fast flicke 24 V DC is not being supplied or the voltage (0.2-secon intervals)

## 1.5 Terminal Layout

$\oslash$		Terminal name	Description
	24V	24V	24V terminal for sensor power and communication.
	0V	0V	0V terminal for sensor power and communication.
	DP	DP	Transmission signal (+) terminal. It connects with DP of the slave module and the Terminator.
	DN LG	DN	Transmission signal (-) terminal. It connects with DN of the slave module and the Terminator.
Ø	•	LG	Functional earth terminal. The one point is grounded with the grounding terminal and functional earth terminal of the PLC (FG terminal).

AnyWireASLINK connection terminal block specification Type: MSTB2,5/5-STF-5,08AU (Phoenix Contact Co., Ltd.)

Electric wire size: 0.2 to 2.5 mm<sup>2</sup> (AWG24 to 12)

Tightening torque: 0.5 to 0.6 Nom (For both connector fixing screw and transmission line connection screw)
Do not tighten terminal screws with a torque outside the above-mentioned

range. Failure to do so may cause equipment failures or malfunctions.

For details on the wiring needed to connect to the terminal blocks shown in the figure above, refer to the following manual.

Refer to the FX3U-128ASL-M User's Manual.

## 2. Installation

For installation details, refer to the following manuals

→ Refer to the FX3U-128ASL-M User's Manual

	RECAL						ΛV	۷A	RN	ING			
•	Make	sure	to	cut	off	all	phases	of	the	power	supply	externally	befo
	attem												
	Failur	e to do	0 80	ma	у са	iuse	electric	sho	ck.				

## **ACAUTION**

Use the product within the generic environment specifications described PLC main unit manual (Hardware Edition). Never use the product in areas with excessive dust, oily smoke, conductiv dusts, corrosive gas (salt air, Cl2, H2S, SO2 or NO2), flammable gas, vibratio or impacts, or expose it to high temperature, condensation, or rain and wind. If the product is used in such conditions, electric shock, fire, malfunction

deterioration or damage may occur.

Do not touch the conductive parts of the product directly

Doing so may cause device failures or malfunctions.

Install the product securely using a DIN rail or mounting screws

Install the product on a flat surface.

If the mounting surface is rough, undue force will be applied to the PC board

thereby causing nonconformities When drilling screw holes or wiring, make sure that cutting and wiring debi do not enter the ventilation slits. Failure to do so may cause fire, equipment failures or malfunctions

Be sure to remove the dust proof sheet from the PLC's ventilation slits who installation work is completed. Failure to do so may cause fire, equipment failures or malfunctions

Make sure to attach the top cover, offered as an accessory, before turning the power or initiating operation after installation or wiring work.

Failure to do so may cause electric shock Connect extension cables securely to their designated connectors

Loose connections may cause malfunctions.

## 2.1 Connection to the PLC

The 128ASL-M connects on the right side of an PLC main unit or extension units/blocks (including special function units/blocks).
For connection to an FX3UC Series PLC or FX2NC Series PLC extension block, an FX2NC-CNV-IF or FX3UC-1PS-5V is required.
For installation method to PLCs, refer to the User's Manual - Hardware Edition of the connected PLC.

## 2.2 Mounting

The product is mounted by the following method.

Direct mounting (mounting screw: M4 screw)
For details, refer to the User's Manual - Hardware Edition of the connected PLC.

3. Wiring

		$\rightarrow$	Ref	er to	the	

## VIRING RECAUTIONS **∴**CAUTION

If an AC power supply is connected to a DC input/output terminal or DC power supply terminal, the PLC will burn out

the power or initiating operation after installation or wiring work. Failure to do so may cause electric shock.

Failure to do so may cause electric shock.
When drilling screw holes or wiring, make sure that cutting and wiring debri do not enter the ventilation sitis.
Failure to do so may cause fire, equipment failures or malfunctions.
Make sure to properly wire to the terminal block (European type) in accordance with the following precautions.
Failure to do so may cause electric shock, equipment failures, a short-circuit wire breakage, malfunctions, or damage to the product.

- The disposal size of the cable end should follow the dimensions described in the manual.

Tightening torque should follow the specifications in the manual Twist the end of strand wire and make sure that there are no loose wires

Do not solder-plate the electric wire ends.

parts are directly stressed. Do not apply the 24VDC power before wiring the entire AnyWireASLINE

Connect a 24VDC external power supply to 128ASL-M for the Make sure to observe the following precautions in order to prevent

1) Do not bundle the main circuit line together with or lay it close to the main circuit, high-voltage line or load line.

place. As a guideline, lay the control line at least 100mm (3.94") or more away from the main circuit or high-voltage lines.

2) Ground the shield wire or shield of the shielded cable at one point on the PLC. However, do not use common grounding with heavy electrica

ace the cables in a duct or clamp them.

If not, dangling cable may swing or inadvertently be pulled, resulting i damage to the module or cables or malfunction due to poor contact. When disconnecting the cable from the module, do not pull the cable by th

For the cable connected to the terminal block, loosen the terminal screw Pulling the cable connected to the module may result in malfunction

# 3.1 AnyWireASLINK connection terminal block

For details on the terminal block layout, refer to section 1.5.

	Item	Description
Model name MSTB2,5/5-STF-5,08AU (Phoenix Cor		MSTB2,5/5-STF-5,08AU (Phoenix Contact Co., Ltd.)
	Electric wire size	0.2 to 2.5 mm <sup>2</sup> (AWG24 to 12)
	Tightening torque	0.5 to 0.6 N•m (It is common also on the connector fixing screw and the transmission line connection screw)

. When the AnyWireASLINK connection terminal block is removed

Before tightening, check that there are no short circuits due to disconnected or frayed wires. Then tighten the screws at both sides securely. (Tightening torque: 0.5 Nem to 0.6 Nem)

# 3.2 Cable treatment

Bare cables can be connected to the AnyWireASLINK connection terminal block; however, for safety reasons, it is recommended to connect the crimped bar terminal Use UL-listed solderless terminals and, for processing, use a tool recommended by

Electric wire size	Electric wire connected number	recommended bar terminals model name (Phoenix Contact Co., Ltd.)
0.75 mm <sup>2</sup>	1 cable	AI 0,75-8 GY
0.75 11111	2 cables	AI-TWIN 2X 0,75-8 GY
1.25 mm <sup>2</sup>	1 cable	AI 1,5-8 BK
1.23 11111	2 cables	AI-TWIN 2X 1,5-8 BK

#### 3.3 Wiring precautions Do not run multiple transmission cables (DP, DN) using a multicore cable

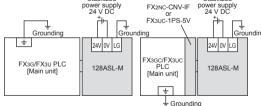

The voltage should not fall below the lower limit of the allowable voltage range due to voltage drop caused by the cable. If the voltage falls below the lower limit, malfunctions may occur.

Do not connect soldered cables directly to the terminals. Doing so may loosen the

screws, resulting in a poor contact. • It is recommended to use a 1.25 mm<sup>2</sup> lead wire for the main line because the power

supply is superimposed on the signal wire in the AnyWireASLINK system neral-purpose wire, VCTF cable and flat cable, etc. can be used. Use stranded wires instead of single core wires

## 3.4 Power supply and grounding wiring FX2NC-CNV-IF

The AnyWireASLINK system external power supply should be turned ON simultaneously with or before the power supply of the PLC main unit it is connected to. (The order is inverted when the system is powered off.)

If the PLC main unit is powered on before the 24 V DC external power supply in the AnyWireASLINK system, a transmission cable voltage drop detection error may occur. If the error including transmission cable voltage drop detection error is detected, the error can be cleared by turning the error flag clear command (BFM#27 b0) from OFF to ON.

# 3.4.2 Grounding

Ground the PLC as stated below.

• Perform class D grounding. (Grounding resistance:  $100 \Omega$  or less)
• Ground the PLC independently if possible.
If it cannot be grounded independently, ground it jointly as shown below.

Position the grounding point as close to the PLC (128ASL-M) as possible to decrease the length of the ground wire

# 4. Specification

4. Specification:
For details on specifications, refer to the following manual.
→ FX3U-128ASL-M User's Manual

#### **⚠WARNING** RECAUTIONS An AnyWireASLINK system has no control function for ensuring safety. When a communication failure occurs in the network, data in the master modu

Check the communication status information and configure an interlock circuit the sequence program to ensure that the entire system will operate safely.

Make sure to have the following safety circuits outside of the PLC to ensure safe system operation even during external power supply problems or PLC failure. Otherwise, malfunctions may cause serious accidents.

JiMost importantly, have the following: an emergency stop circuit, a protection circuit, an interlock circuit for opposite movements (such as normal vs. reverse rotation), and an interlock circuit (to prevent damage to the equipment

at the upper and lower positioning limits). at the upper and lower positioning limits).

2)Note that when the PLC CPU detects an error, such as a watchdog timer error, during self-diagnosis, all outputs are turned off. Also, when an error that cannot be detected by the PLC CPU occurs in an input/output control block, output control may be disabled.

External circuits and mechanisms should be designed to ensure safe machinery operation in such a case.

# PRECAUTIONS

Configure safety circuits, such as an emergency stop circuit and interlock circuit external to the AnyWireASLINK system

nstall module so that excessive force will not be applied to the terminal blocks Failure to do so may result in wire damage/breakage or PLC failure.

## SPOSAL RECAUTIONS **∴**CAUTION Please contact a certified electronic waste disposal company for the environmentally safe recycling and disposal of your device.

TRANSPORTATION AND STORAGE PRECAUTIONS **⚠**CAUTION The PLC is a precision instrument. During transportation, avoid impacts large than those specified in the general specifications of the PLC main unit manual by using dedicated packaging boxes and shock-absorbing palettes. Failure to do so may cause failures in the PLC. After transportation, verify operation of the PLC and check for damage of the mounting part, etc.

TI Applicable I E		
Model name	Applicability	Number of connectable units
FX3G Series PLC	Ver. 1.00 or later	One unit
FX3GC Series PLC*1	Ver. 1.40 or later	One unit
FX3U Series PLC	Ver. 2.20 or later	One unit
FX3UC Series PLC*1	Ver. 2.20 or later	One unit

The version number can be checked by reading the last three digits of device D8001 or D8101.

\*1 An FX2NC-CNV-IF or FX3uC-1PS-5V is necessary to connect the FX3u-128ASL-M with the FX3GC/FX3uC PLCs.

Make sure to cut off all phases of the power supply externally before attempting wiring work.

Failure to do so may cause electric shock or damage to the product.

Connect the DC power supply wiring to the dedicated terminals described it

Make sure to attach the top cover, offered as an accessory, before turning of

Do not connect more than the specified number of wires or electric wires or Affix the electric wires so that neither the terminal block nor the connecte

damage to the machinery or accidents due to abnormal data written to the PLC under the influence of noise:

Otherwise, noise disturbance and/or surge induction are likely to take

To tighten the terminal block, a flathead screwdriver having a tip size of 0.6×3.5

Before removing the transmission cable terminal block, check that the fixing screws on both sides are completely loosened (removed from the socket). Pulling with excessive force while the fixing screws of both ends are still When the AnyWireASLINK connection terminal block is attached

How to obtain manuals

Certification of UL, cUL standards ASL-M adapter comply with the UL standards (UL, cUL). (December 2014

Regarding the standards that comply with the main unit, please refer to either the FX series product catalog or consult with your nearest Mitsubishi product provider. Compliance with EC directive (CE Marking)

## Caution for EC Directive

Installation in Enclosure Programmable logic controllers are open-type devices that must be installed and used within conductive control cabinets. Please use the programmable logic controller while installed within a conductive shielded control cabinet. Please secure the cabinet door to the control cabinet (for conduction). Installation within a control cabinet greatly affects the safety of the system and aids in shielding noise from the programmable logic controller. grammable logic controller.
